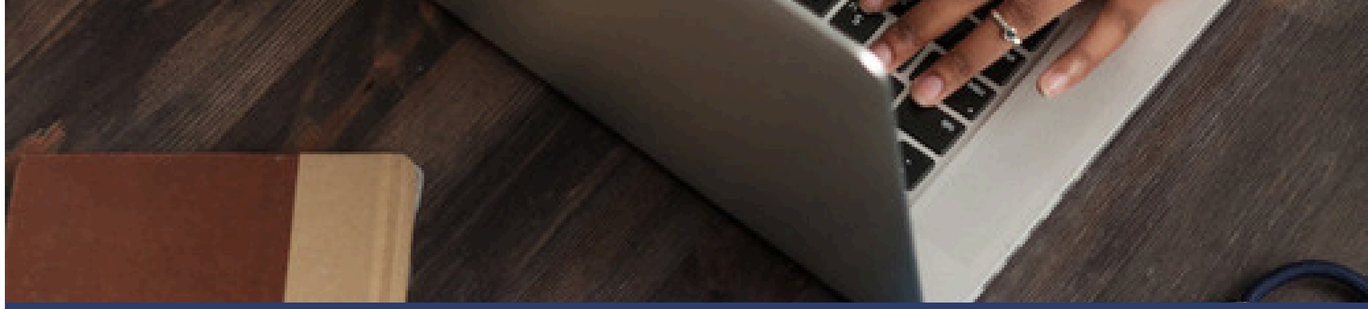
Business Problem

State Medicaid programs lack an integrated and transparent data system to accurately set managed care rates that reflect real healthcare costs and align payments with value-based care outcomes.

Why is it important?

- Medicaid covers over 90 million Americans
- Healthcare costs continue to rise every year
- Better data can improve care quality and cost efficiency
- Helps ensure fair payments and better patient outcomes



Who is affected?

State Governments – set Medicaid payment rates

Managed Care Organizations (MCOs) – manage patient care

Healthcare Providers – deliver treatment and services

Patients – rely on Medicaid for healthcare access

Proposed solution

Solution

Patient Engagement Portal

Features:

- appointment scheduling
- quick health check surveys
- medication tracking
- visit history tracking
- patient health progress

Challenges & Solutions

Potential Risks

Risk	Problem	Solution
Low Patient Adoption	Some patients, especially elderly individuals, may struggle to use the app or forget to complete surveys.	Design a **simple interface with large buttons**, allow **caregiver access**, and send **SMS reminders**.
Inaccurate Patient Responses	Patients may misunderstand questions or enter incorrect information, which could affect data quality.	Use **short multiple-choice questions** and **cross-verify responses with claims, pharmacy, and hospital data**.
Limited Access to Technology	Some Medicaid patients may not have smartphones or reliable internet, which could lead to **skewed or unfair data**.	Provide a **hospital or clinic website portal where patients can complete surveys during or after visits**.
